Guided Journey Mode
AI-powered step-by-step hospital navigation with visual position indicator, next step preview, and estimated wait time using simple icons and progress flow

Transparent Queue System
Real-time queue logic display with clear delay explanations and prioritization rationale to build trust and reduce frustration

AR Mini Game Hub
Interactive augmented reality experience with engaging mini-games designed to captivate children during wait times

Smart Wait-Time Predictor
Highly accurate real-time queue prediction system that indicates exactly how long users can step away and alerts before their turn

Comfort Priority Engine
AI system that detects vulnerable or frequent patients and automatically suggests low-crowd slots or prioritizes their queue

Caregiver Control Dashboard
Centralized dashboard combining queue updates, reports, reminders, and voice assistance for efficient multi-responsibility management

Zero Interaction Mode
Fully self-guided experience with chatbot assistance, clear navigation flows, and digital instructions without staff interaction

Voice-Guided Accessibility System
Complete voice navigation with audio instructions, haptic feedback, and screen-reader support for visually impaired users

CalmMind AI System
AI that filters stressful content and delivers calming, doctor-approved information with guided breathing and reassurance

Silent Smart Alert System
Silent notifications using strong vibrations, flashing visuals, and smartwatch sync to alert patients without audio announcements

Care Priority Mode
Automatically detects sensitive conditions and provides priority queue access, comfort notifications, and supportive guidance

Engagement Features
Daily challenges, leaderboards, character customization, progressive difficulty levels, and social sharing of achievements

Reward System
Collect virtual badges, unlock new environments, earn points for achievements, and build personal reward collection

Interactive Elements
Tap-to-collect mechanics, gesture-based interactions, puzzle challenges, and character animations responding to player actions

Icon-Based Navigation
Universally recognized icons (home, settings, help) instead of text labels for primary functions

Voice Command Support
Voice input for common tasks like 'open settings' or 'help me' with clear audio feedback

Language Selection
Simple flag-based language switcher on startup screen for quick multilingual access

Contextual Help Icons
Small '?' icons with simple explanations for each feature without overwhelming users

Visual Feedback
Clear animations and color changes when buttons are pressed or actions complete

Simplified Color Scheme
3-4 primary colors maximum with high contrast for accessibility and clarity

Large Touch Targets
Minimum 48x48px buttons and controls for easy interaction on any device size

Gesture Support
Simple swipe and tap gestures with visual tutorials on first use

Offline Functionality
Core features work without internet; voice commands cached for offline use

Accessibility First
Screen reader compatibility, adjustable text size, and high contrast mode options
